

Section 17.24.520

THICK OVERBURDEN AND DISPOSAL OF EXCESS SPOIL

(1) Documentation That Sufficient Spoil Volume Exists

Thick overburden that would result in excess spoil materials does not exist at this operation. Sufficient volumes of spoil are available to restore the disturbed area within the permit boundary to approximate original contour.

(2) Disposal of Excess Spoil Outside Mined Area

No overburden will be disposed of outside the mine area, since excess material does not exist at this operation.

(3) Spoil not Required to Achieve Approximate Original Contour

All spoil generated as a result of mining operations will be utilized for contouring the land during final reclamation. SCCC has no plans to place spoil material outside the active mine workings.
